

Enabling API Upgrades

Many people cannot afford key upgrades!

Software ecosystems are... *messy*

Program Transformations for Domain Experts

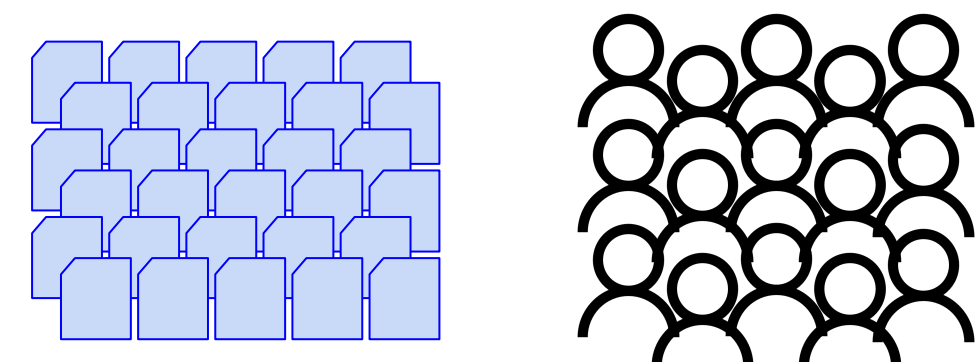

Type Preservation: upgrade **reliability** over **all code**

If $\Delta | \Gamma \vdash e : t$, $\Delta | \Gamma \vdash r \text{ ok}$, $\Delta | \Gamma \vdash e \rightarrow_r e'$, then $\Delta | \Gamma \vdash e' : t$
 where $r = \text{with } \Pi M : p \gg q \text{ with } \Pi = \$x_i : t_i$

Tools must deal with many **social** challenges

↑ **Scale**

to the number of projects and teams

Expertise ↓

of the developers and their users

↑ **Priorities**

of different developers and users

Visibility ↓

into existing users and their code

Semantic Synthesis: **scale** existing approaches for **everyone**

M: sleep(\$expr)
 >> sleep(to<sec>(\$expr))

inference

M: to<secs>(\$1 + \$r) >> to<secs>(\$1) + to<secs>(\$r)	M: to<secs>(\$1:secs - \$r:secs) >> \$1 - \$r
M: to<secs>(\$1 / \$r) >> to<secs>(\$1) / \$r	M: to<secs>(\$1:time - \$r:time) >> \$1 - \$r
M: to<secs>(\$1 % \$r) >> to<secs>(\$1) % to<secs>(\$r)	M: to<secs>(\$1 * \$r:secs) >> \$1 * \$r

Change in Software Ecosystems (PLATEAU 2021)
