

# Writing as a Tool in Visualization Design

Chase Stokes  
UC Berkeley

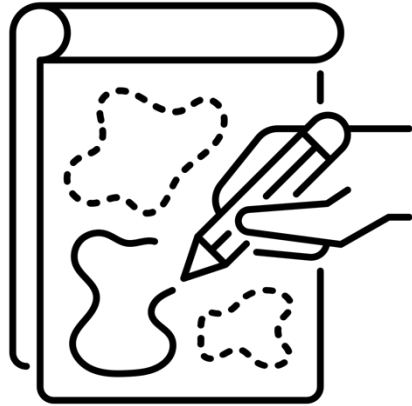

Clara Hu

Marti Hearst  
UC Berkeley

EPIC

Visualization designers often sketch or wireframe their designs prior to implementing them.

Sketching

Wireframing

**Writing**

Writing, on the other hand, has been mostly overlooked as an element of design practice.

- Writing may help **novice designers** plan out and understand their visualizations
- Written content may help train chart creation models and support the **automation of basic design decisions**.
- Leveraging language as part of the design process may **increase opportunities for human-AI collaboration**.

## Writing

So, why do we care about writing in visualization design?

# “Writing” as a tool

- **Writing Rudder:** hand-written or typed language created and/or used during the design process, describing the message, story, or key goals of the design itself

**Study 1:** Do designers use writing rudders in the design process?

**Study 2:** What is the impact of writing rudders on the design process?

- Participants had to be:
  - Based in the US
  - Fluent in English
  - Designing visualizations as part of a *paid* role.

“Writing Rudder”

McKenna, S., Mazur, D., Agutter, J., & Meyer, M. (2014). Design Activity Framework for Visualization Design. *IEEE Transactions on Visualization and Computer Graphics*, 20(12), 2191-2200.

- 11 participants used writing to **understand** the key questions the design would be used to answer.
- 7 participants used writing to **ideate** different ways to address the needs of the design.

 language describing the message,  
story, or key goals of the design

## Do designers use writing rudders in the design process?

- 1 Most designers do **not** use writing rudders in the design process.
- 2 If designers do use writing rudders, they are mostly used in the **early** stages of the design process.

## What is the impact of writing rudders on the design process?

Key Questions

Possible  
Conclusions

- Demographics

### Interview

**Design  
Process**

**Design  
Exercise**

## Exercise Overview

### Overall Goal:

Identify relevant Chicago weather trends to inform marketing strategy for waterproof windbreakers.

### Specific considerations:

Advertisement should begin 1 month before peak use.

### Audience:

Marketing strategists

## 1. Familiarize yourself with the data

Take a second to look at the Data tab and familiarize yourself with the data itself. Ask the interviewer any questions you may have about the data and the task.

- Demographics

## Interview

### 2. Complete the writing step

Before designing the visualization, write a list of possible questions that a user may address with the visualization or set of visualizations that you plan to make. Feel free to use your imagination. No answer is right or wrong.

**Write one key question that a user may use the design to address.**

**Write another key question that a user may use the design to address.**

**Write a third key question that a user may use the design to address.**

### 3. Design!

Process

Exercise

Process**

**Design  
Exercise**

**Reflections**

## Key Questions

N = 8

“When is the weather in Chicago the worst and a windbreaker is required?” [P107]

## Possible Conclusions

N = 5

“The month of X is the wettest month... therefore a good idea to start campaign 30 days prior.” [P110]

## Narrative or Story

N = 2

“Weather is related to purchasing of rainwear... By analysis of weather records, we can see...” [P105]

## Key questions and possible conclusions lead to a more user-centered, focused design process.

“I was surprised at how much it **guided me in the process**. [It] hadn't really occurred to me to do it like that before. And I feel like **it helped me stay really focused**.” [P110]

## Key questions and other rudders could serve as evaluation criteria for the final design.

Evaluate and Discuss Design

“The end of the project comes, and... I’m like ‘**Does it match the questions?**’ And then [the client] would just verbally have a conversation. ‘**Do you remember those questions that we set out? I think we’re answering those.**’” [P104]

## Stating outcomes may bias the data exploration stage of design, causing concern.

“Titles can be a bit limiting because **you’re backing yourself into a conclusion right away** rather than trying to gather up what you have and see how it fits.” [P111]

## Stating outcomes may bias the data exploration stage of design, causing concern.

“I like [narrative] for when you’ve seen the trends. That’s how you’re really building up your case and sharing it. But I think grounding it in the question we’re answering.” [P101]

# “Writing” as a tool

- **Writing Rudder:** hand-written or typed language created and/or used during the design process, describing the message, story, or key goals of the design itself

**Study 1:** Do designers use writing rudders in the design process?

**Study 2:** What is the impact of writing rudders on the design process?

Writing is not **currently** a consistent step in the visualization design process.

### Study 1

No use

Incidental

**Deliberate**

### Study 2

No use

Incidental

**Deliberate**

Writing is not **currently** a consistent step in the visualization design process.

Introducing the simple writing rudder intervention can **focus the design process on user needs and perspectives.**

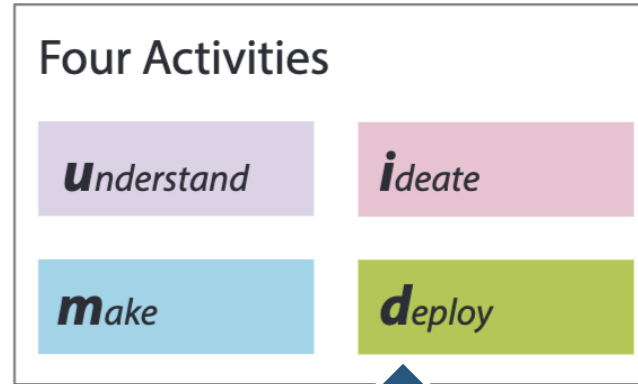

Writing is not **currently** a consistent step in the visualization design process.

Introducing the simple writing rudder intervention can **focus the design process on user needs and perspectives.**

There are many important areas of **future work** which further explore how writing as a tool for visualization design.

# Future Work

**Evaluation of impact**  
of writing rudders on  
resulting designs

# Future Work

**Evaluation of impact**  
of writing rudders on  
resulting designs

Writing rudders as an  
**educational tool** for  
visualization design.

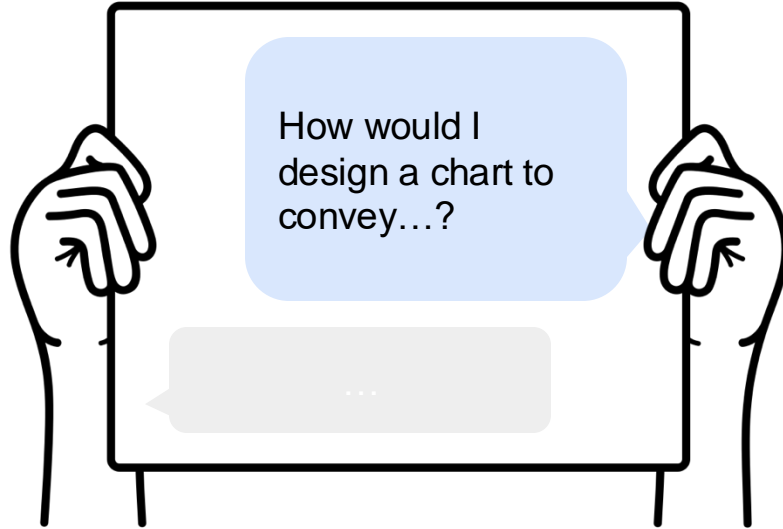

# Future Work
