Program Sketches with Scorer Holes

David Minh-Duy Cao, Sarah E. Chasins April 16, 2025 • EPIC Retreat

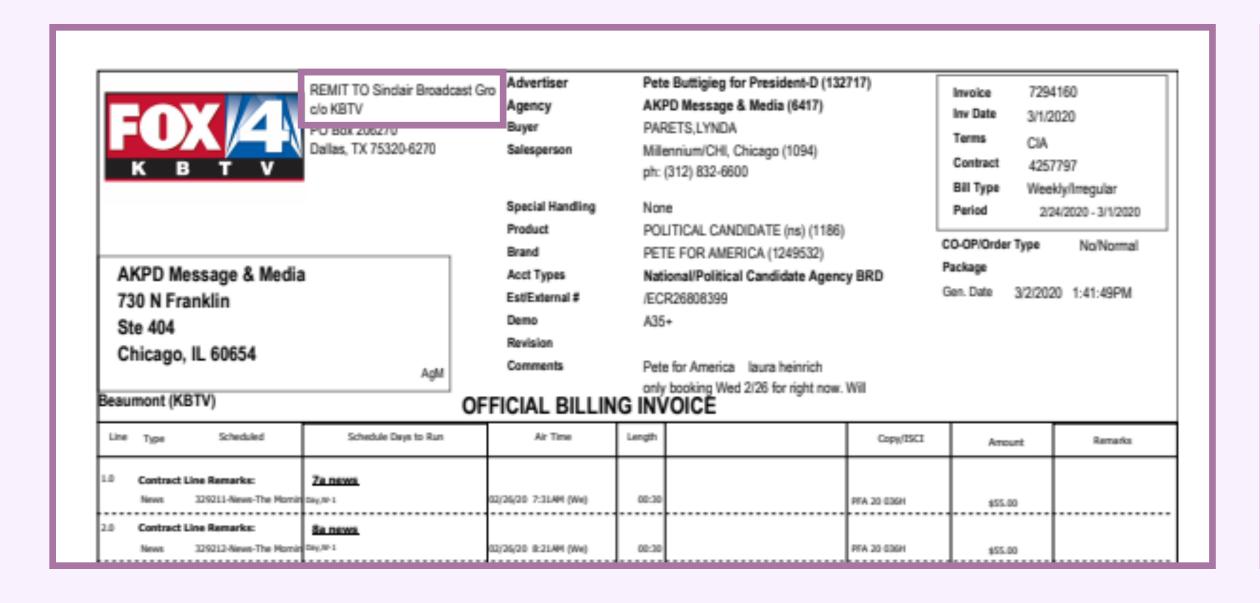

### Motivation:

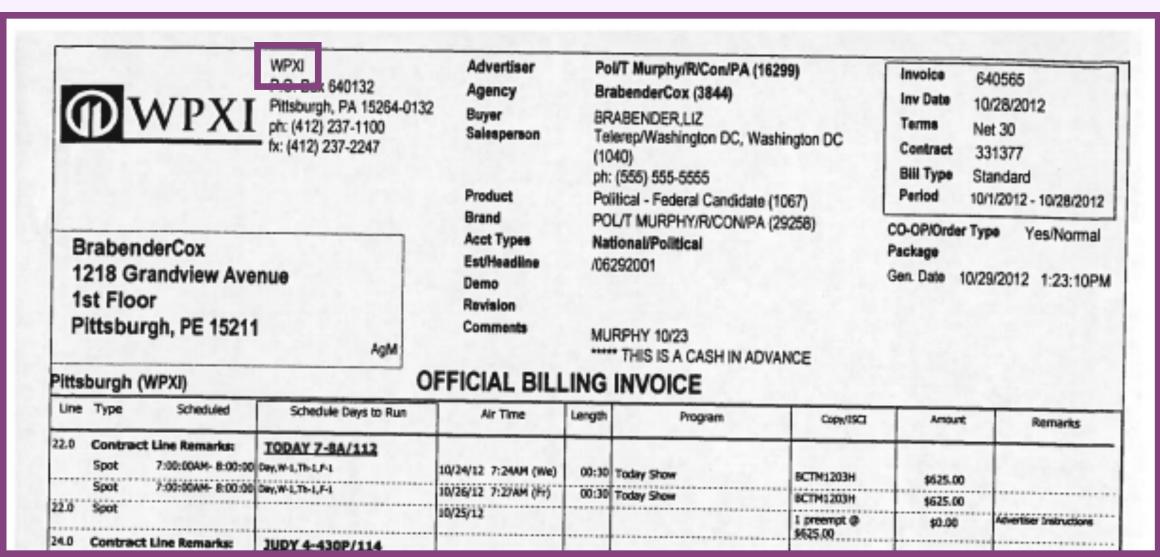

Folks are often charged with getting information out of templated PDF documents

### Motivation:

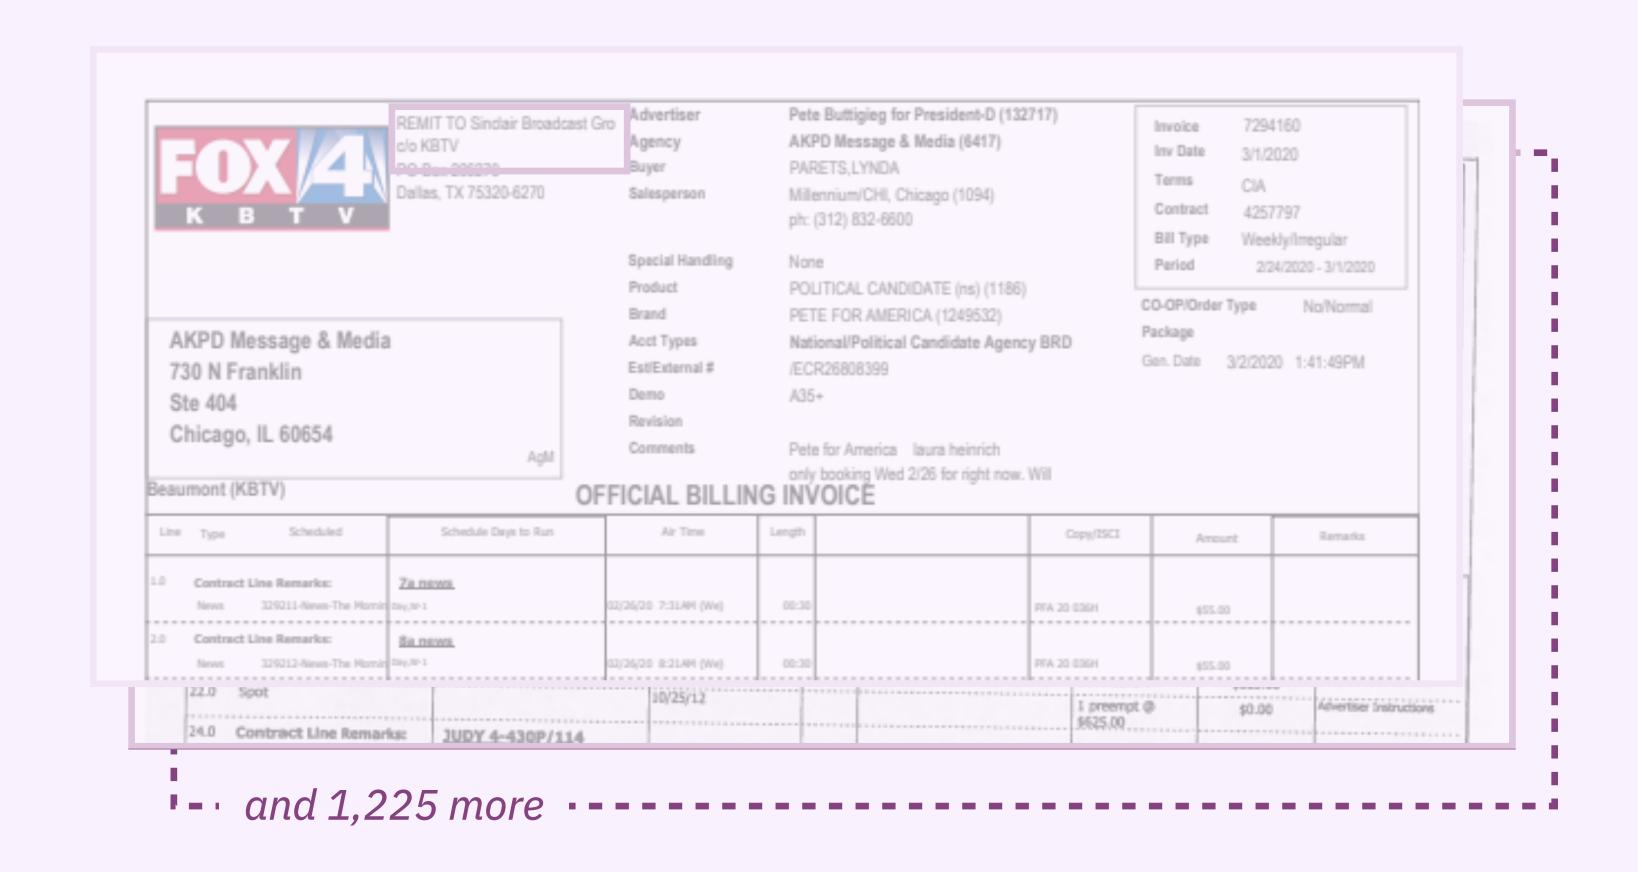

Folks are often charged with getting information out of **templated** PDF documents that are **heterogeneous** (differences in formatting or alignment, PDF artifacts, ...).

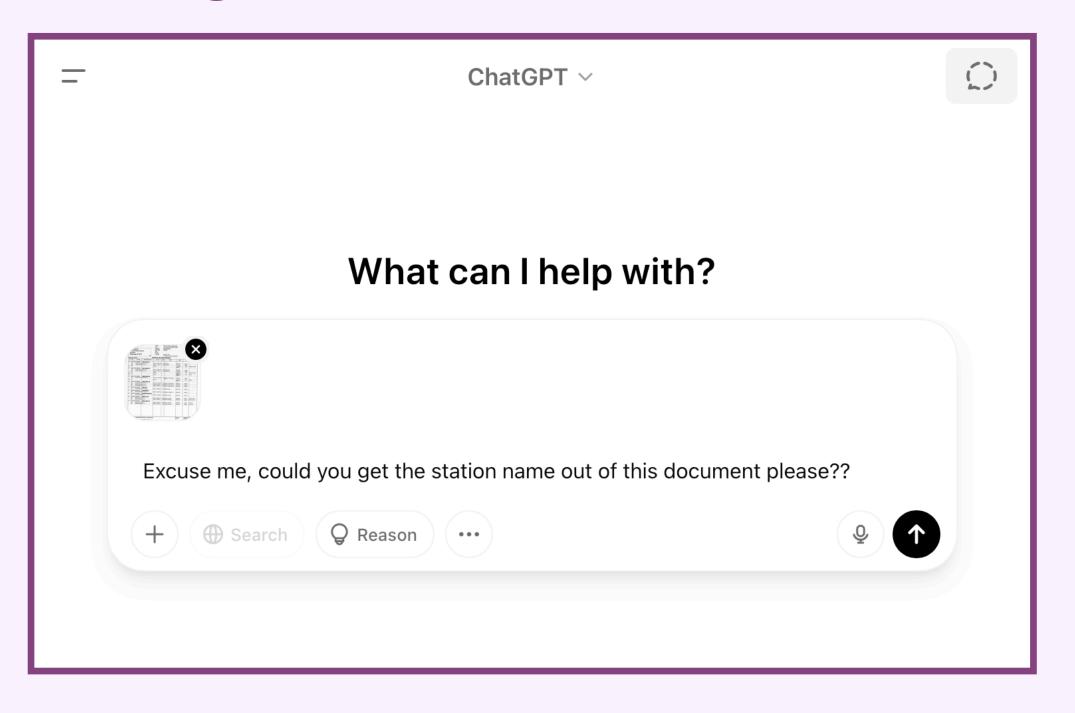

### Motivation:

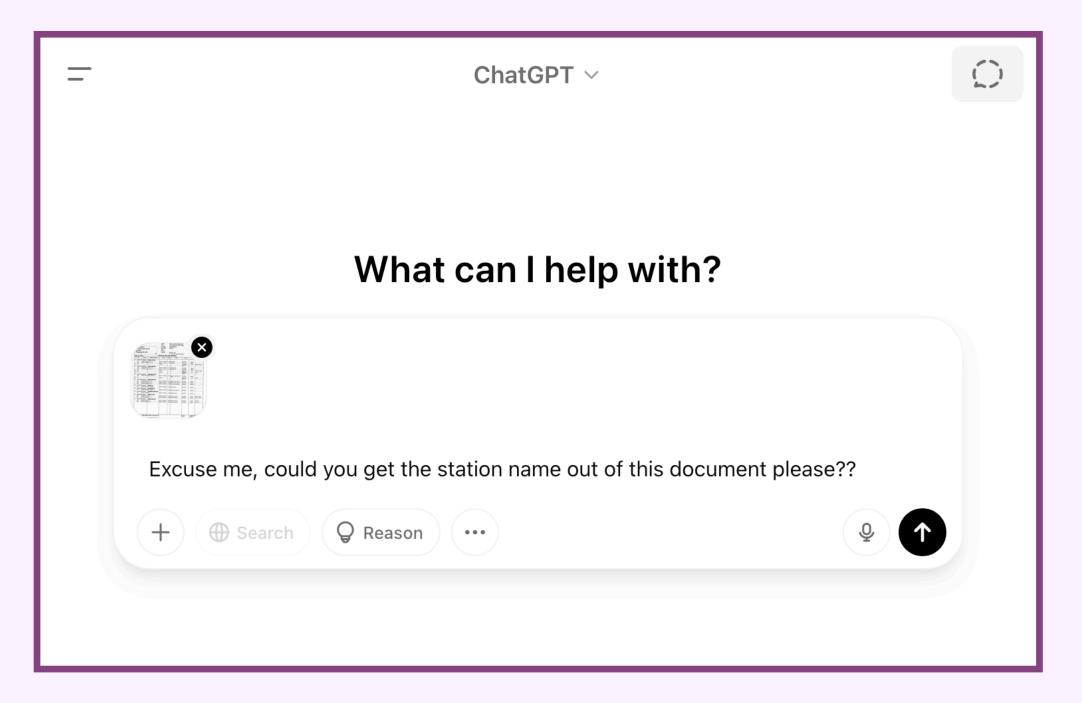

Folks are often charged with getting information out of **templated** PDF documents that are **heterogeneous** (differences in formatting or alignment, PDF artifacts, ...). and **numerous** (hundreds or thousands of documents).

## LLMs (e.g., GPT-4o)?

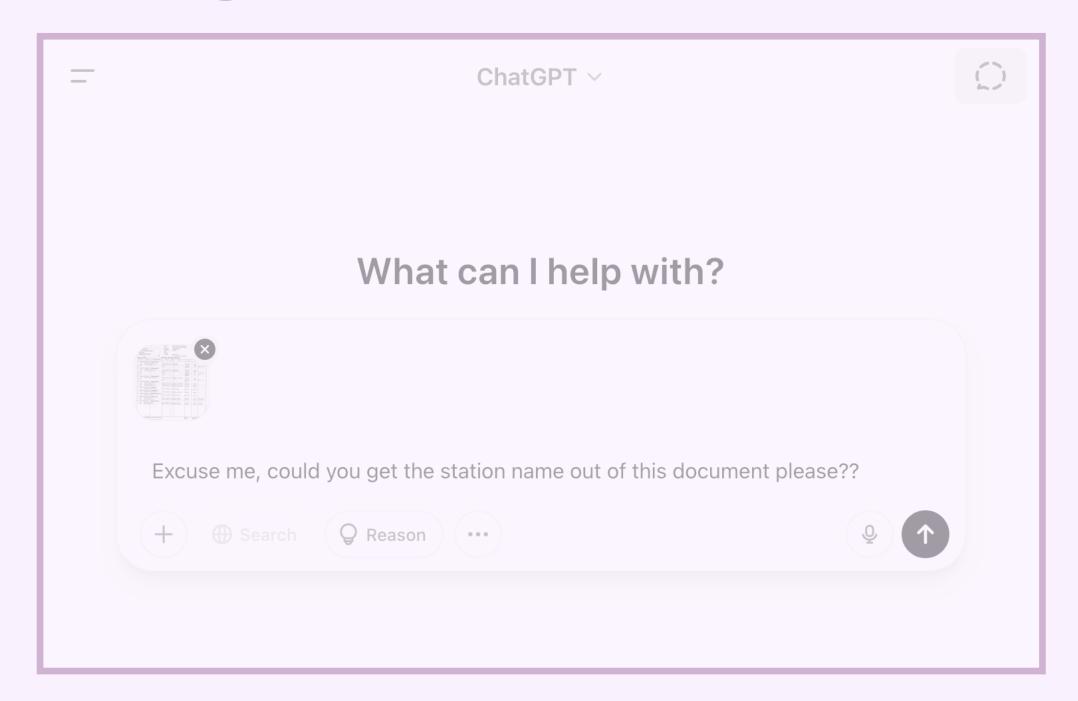

## LLMs (e.g., GPT-4o)?

Running our benchmark suite of **1,227 documents** took **≥14.5 hours** and cost us **\$1,675.05.** 

### LLMs (e.g., GPT-40)?

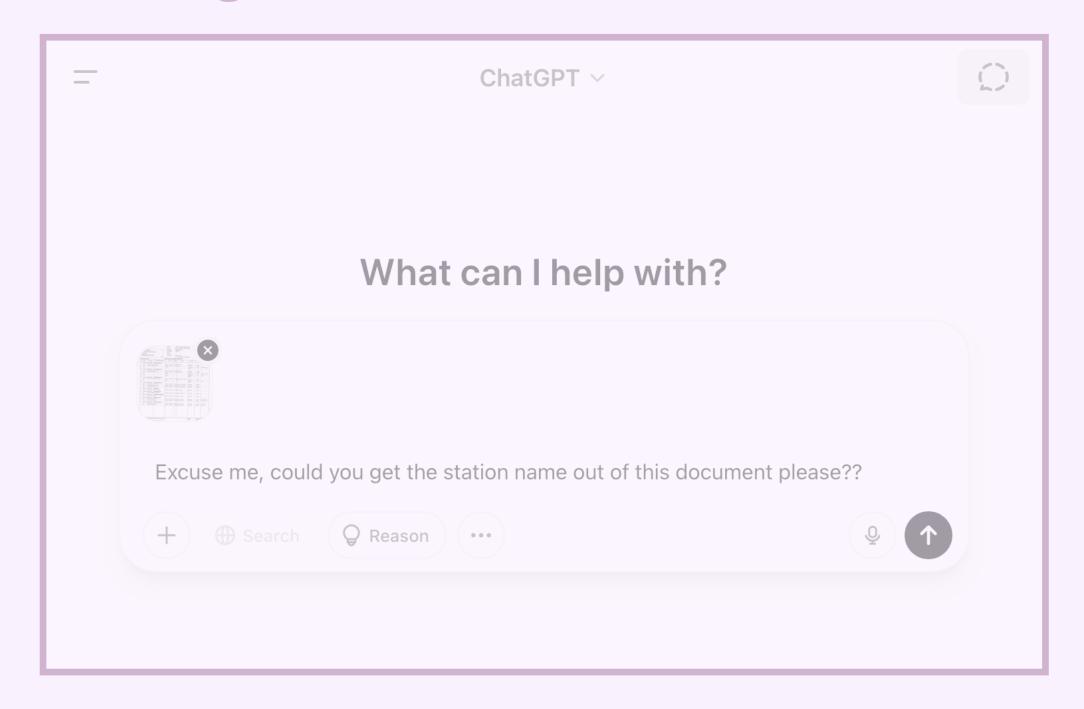

Running our benchmark suite of **1,227 documents** took **≥14.5 hours** and cost us **\$1,675.05.** 

### Traditional program synthesis?

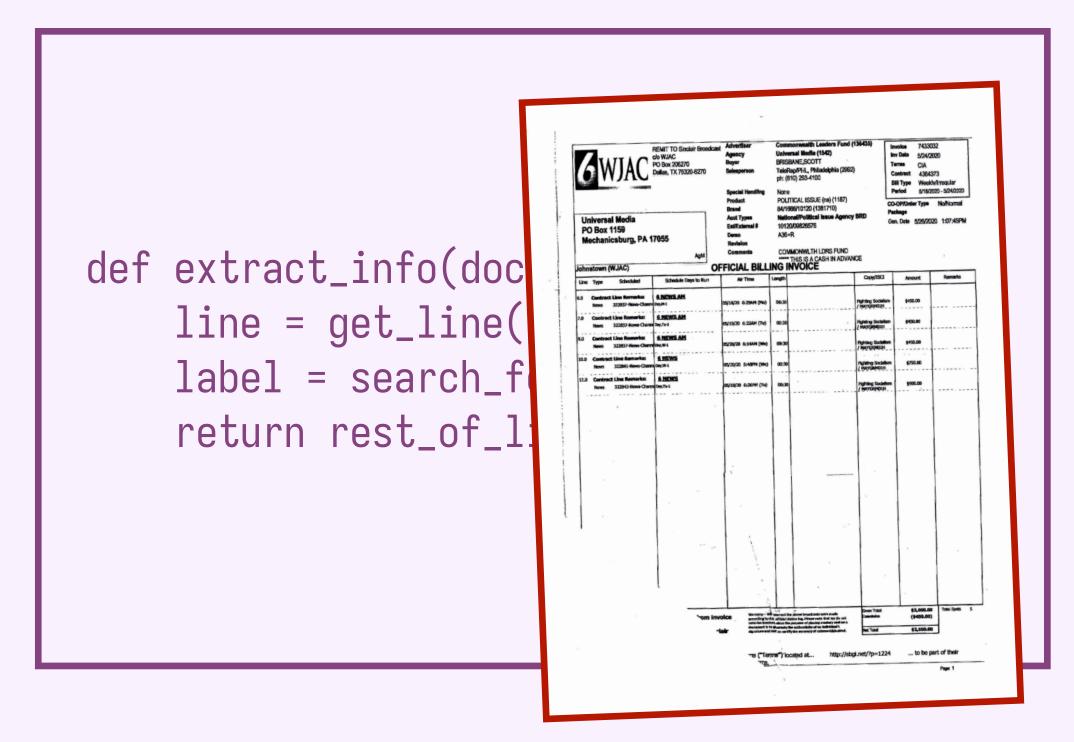

```
def extract_info(doc):
    line = get_line(4, doc)
    label = search_for("Station:", line)
    return rest_of_line(label)
```

### LLMs (e.g., GPT-40)?

Running our benchmark suite of **1,227 documents** took **≥14.5 hours** and cost us **\$1,675.05.** 

### Traditional program synthesis?

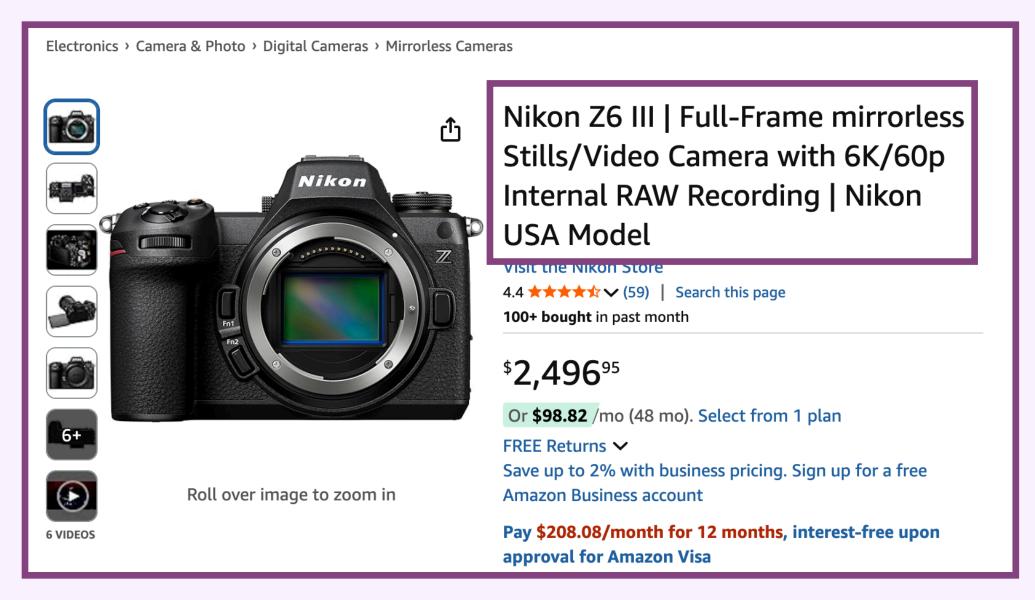

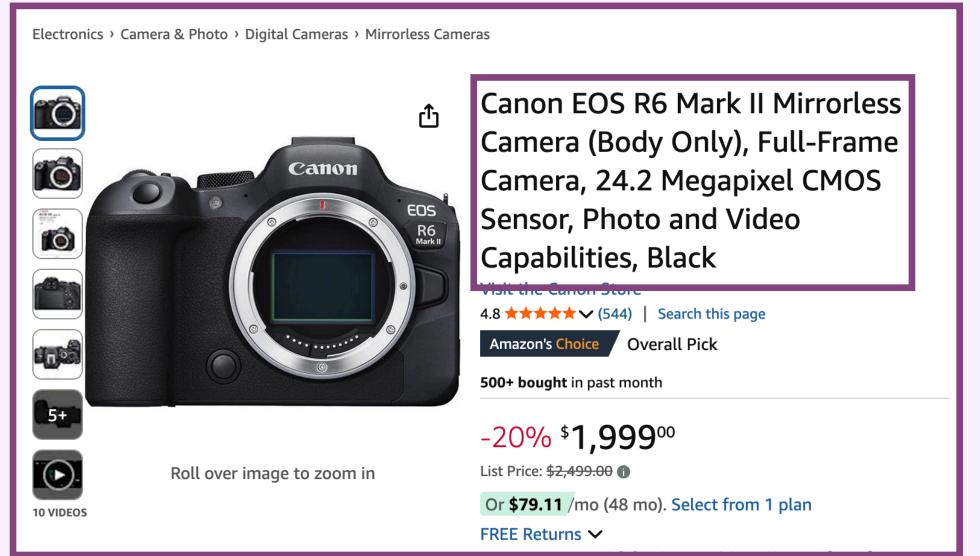

Traditional synthesis techniques don't work with messy PDF data.

Can we adapt traditional synthesis techniques for messy data domains?

# Can we adapt traditional synthesis techniques for messy data domains?

Let's use insights from Ringer and web automation.

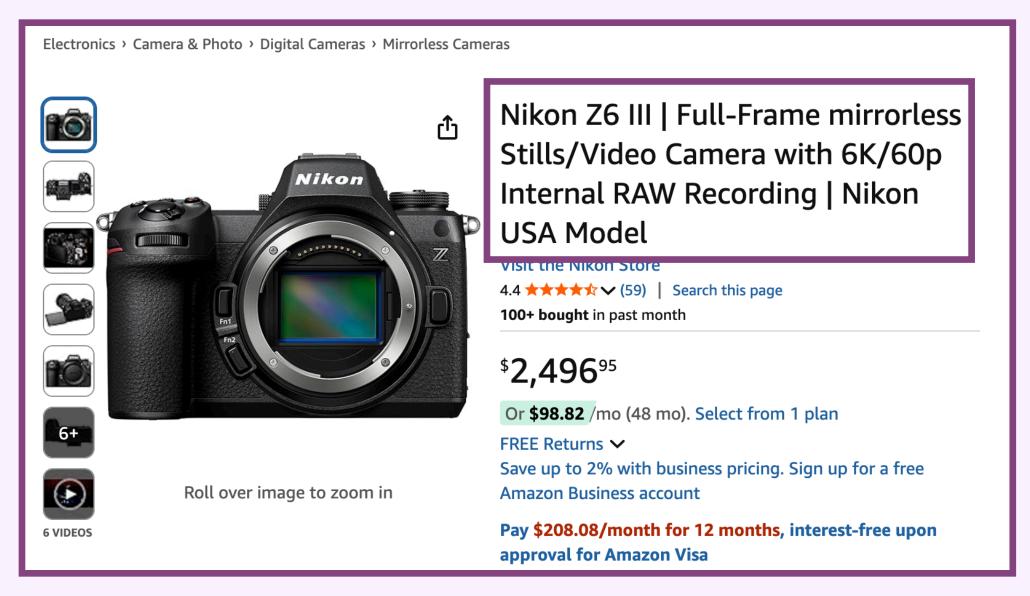

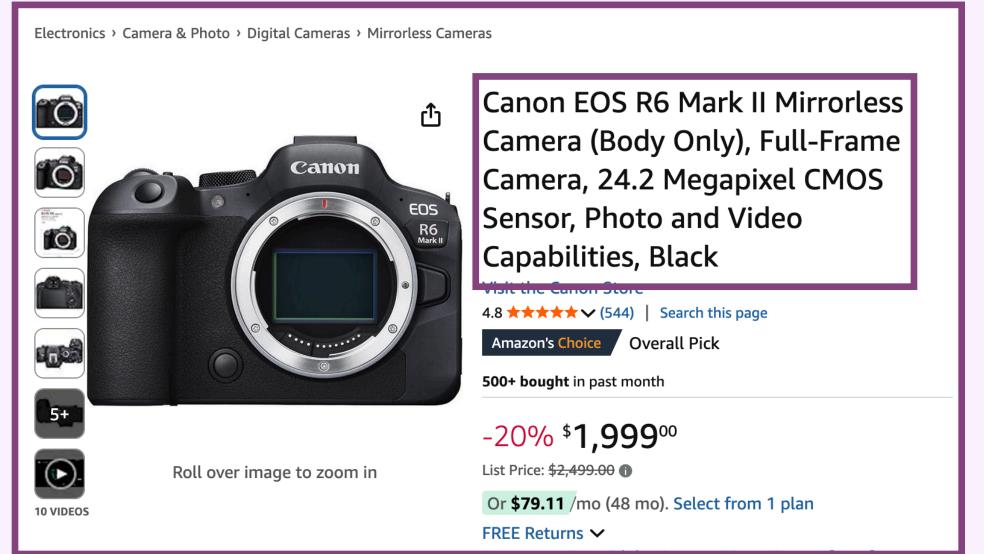

Can we adapt traditional synthesis techniques for messy data domains?

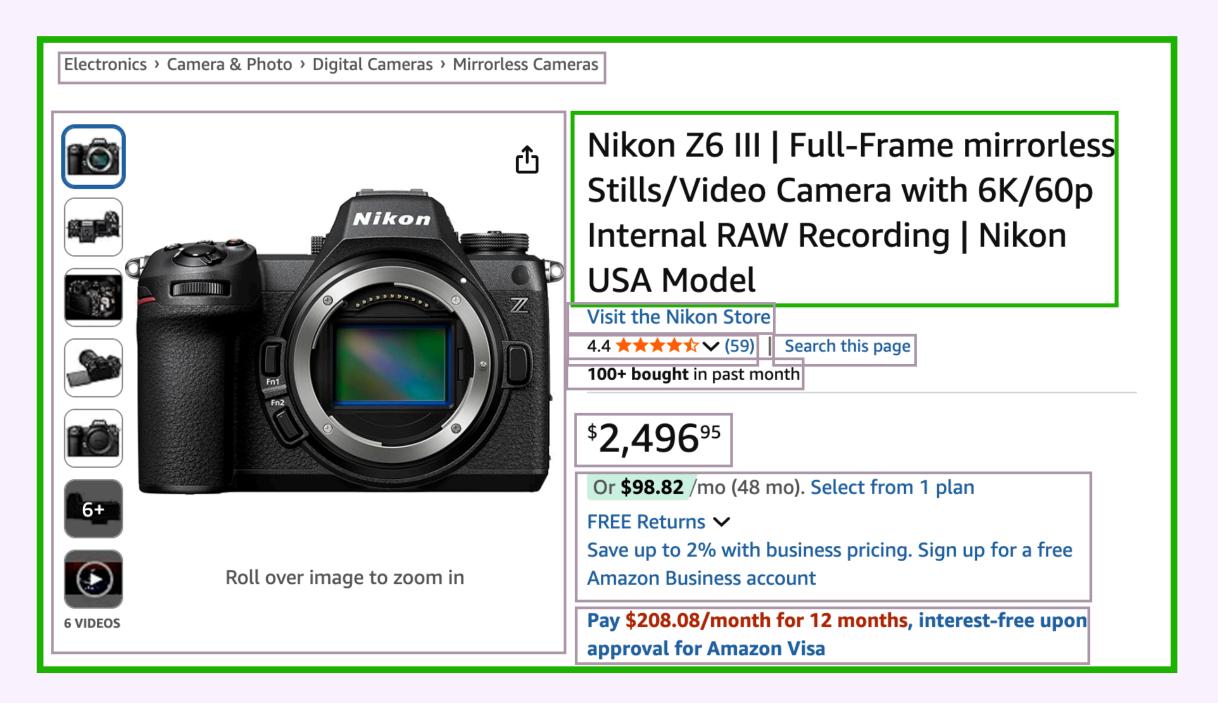

Let's use insights from Ringer and web automation.

Ringer's scorers contend with webpage heterogeneity.

Projected Ringer benchmark completion time: the year 4105

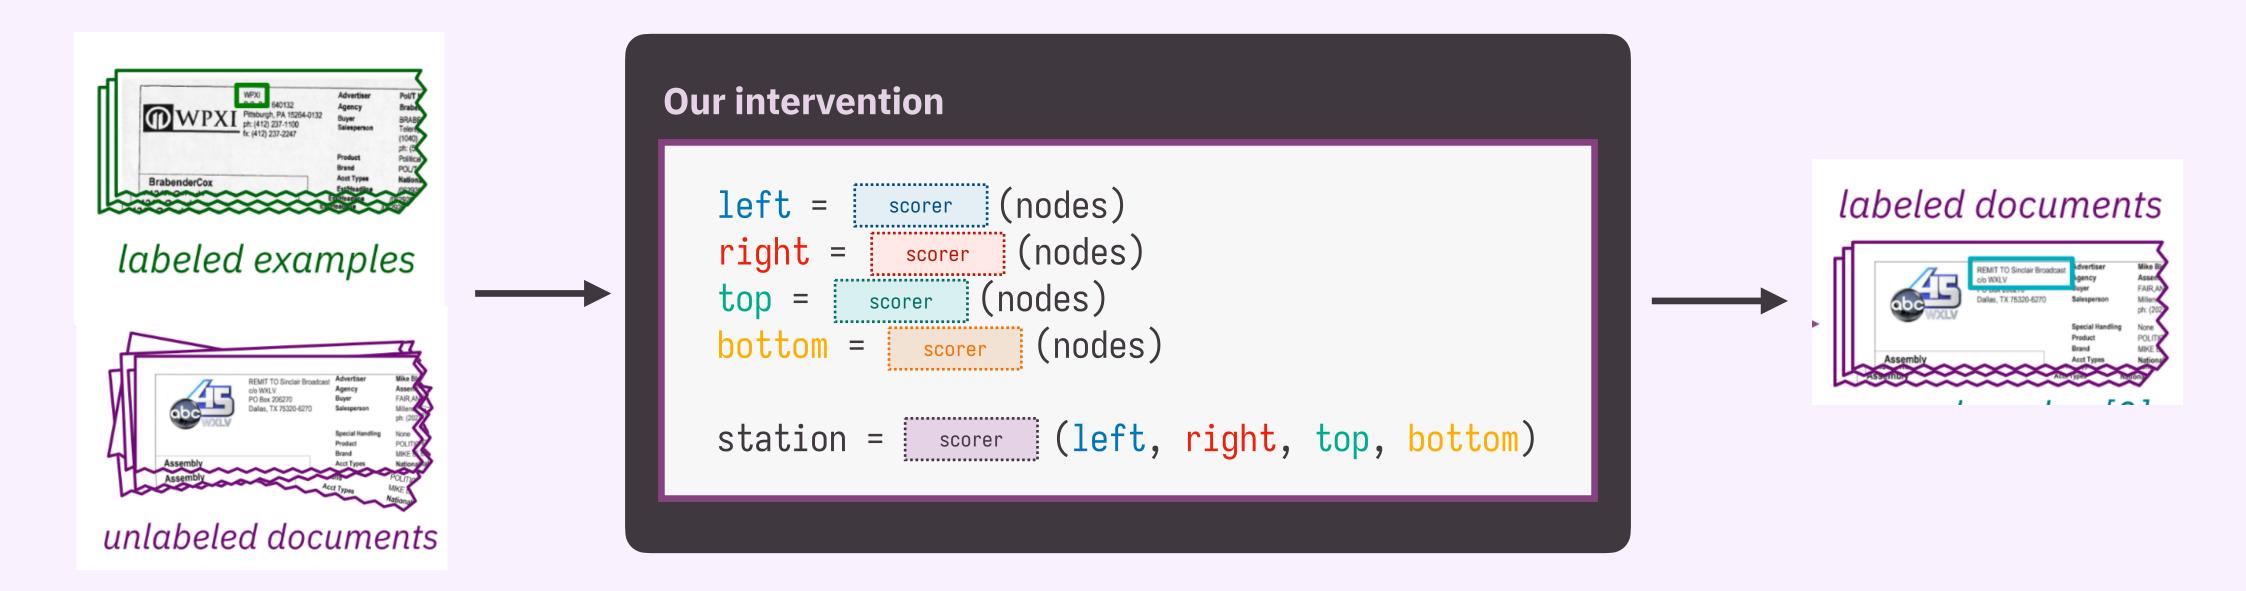

Canon EOS R6 Mark II Mirrorless Camera (Body Only), Full-Frame Camera, 24.2 Megapixel CMOS Sensor, Photo and Video Capabilities, Black

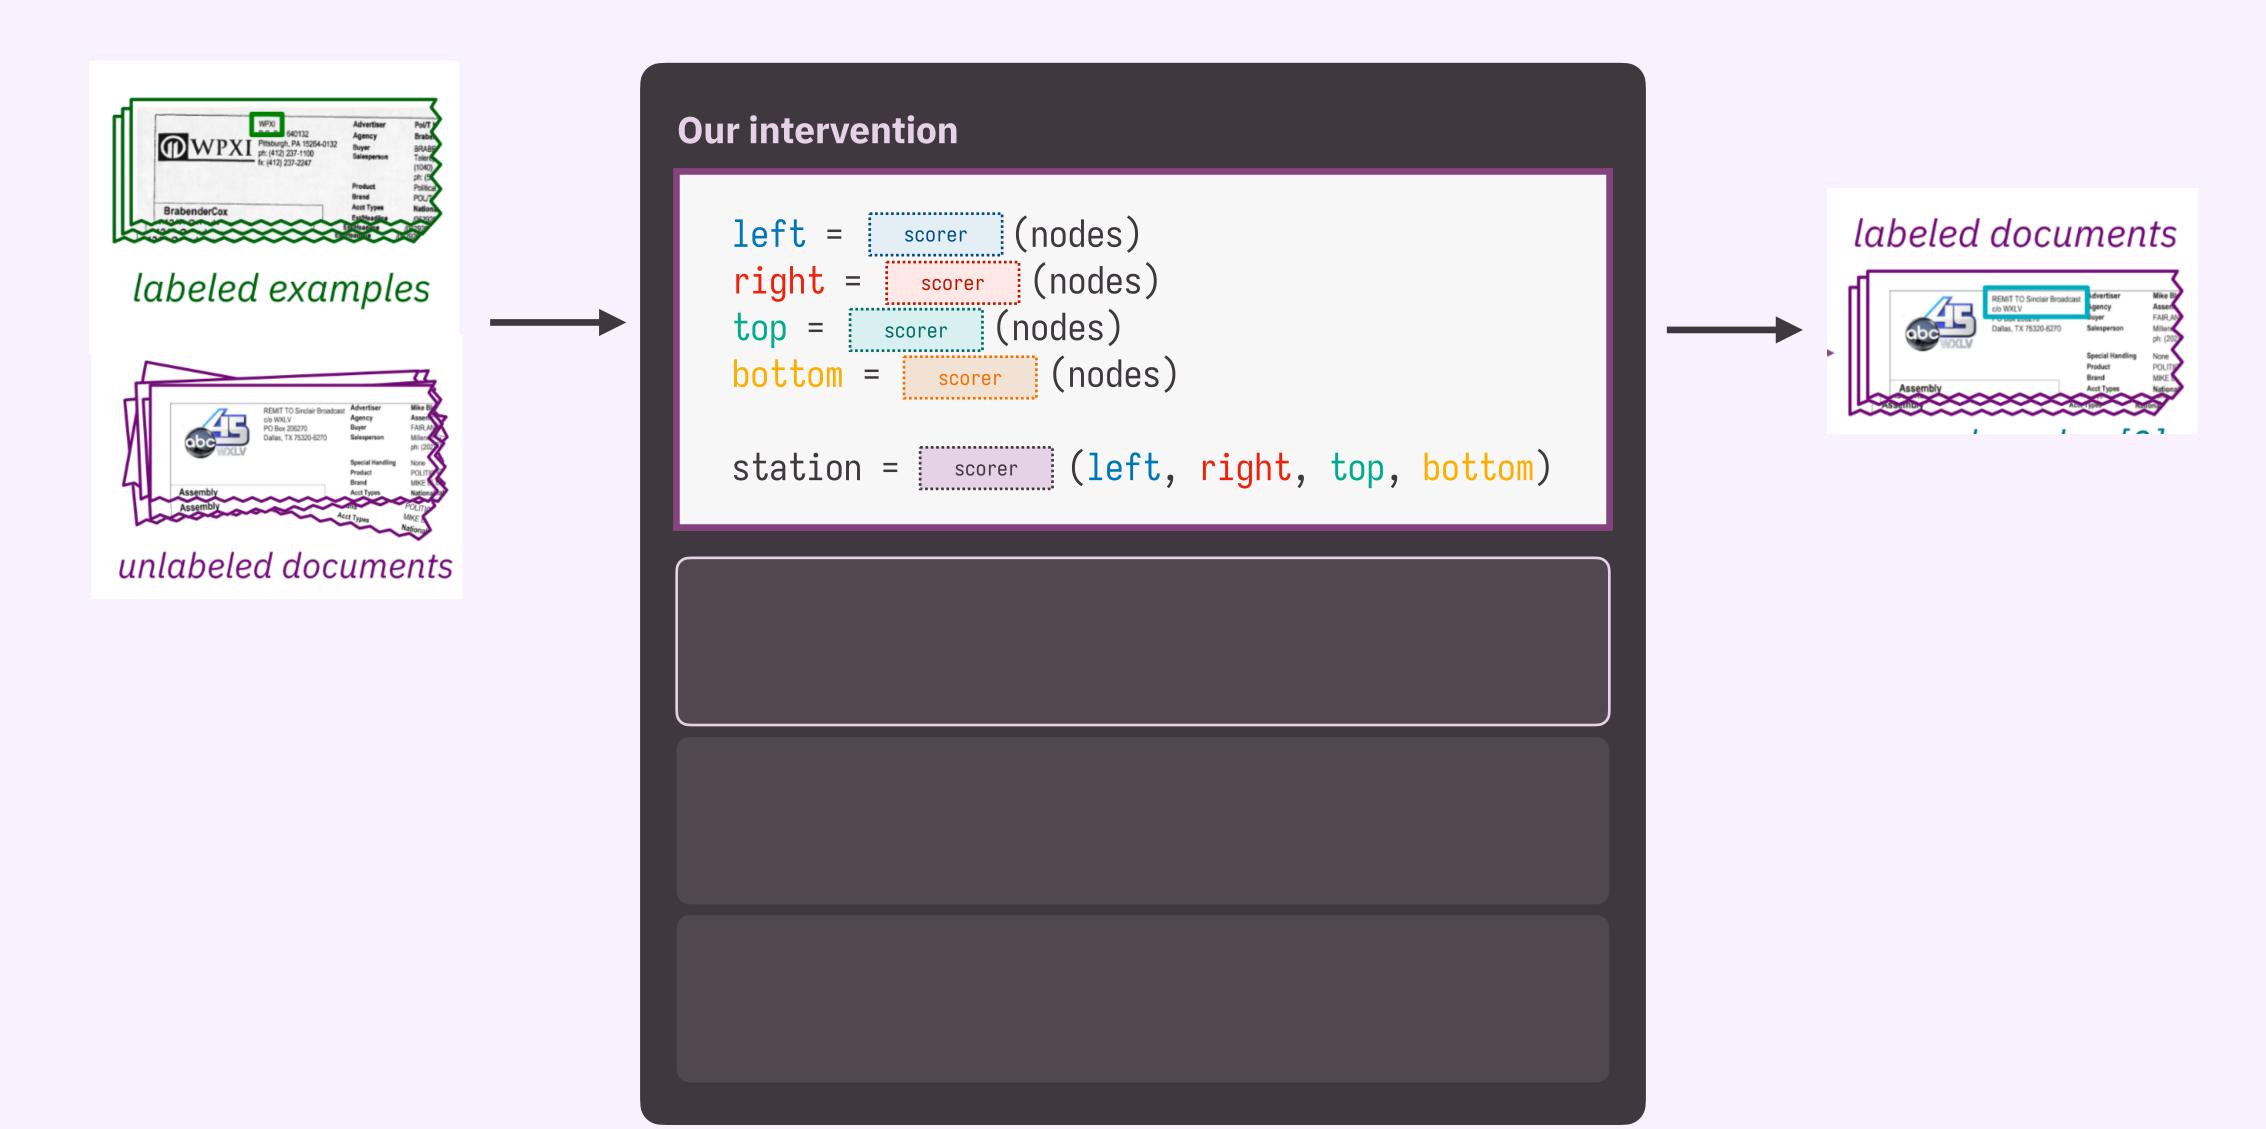

Ringer's scorers require structured documents.

Program sketches with scorer holes adapt traditional synthesis for messy data.

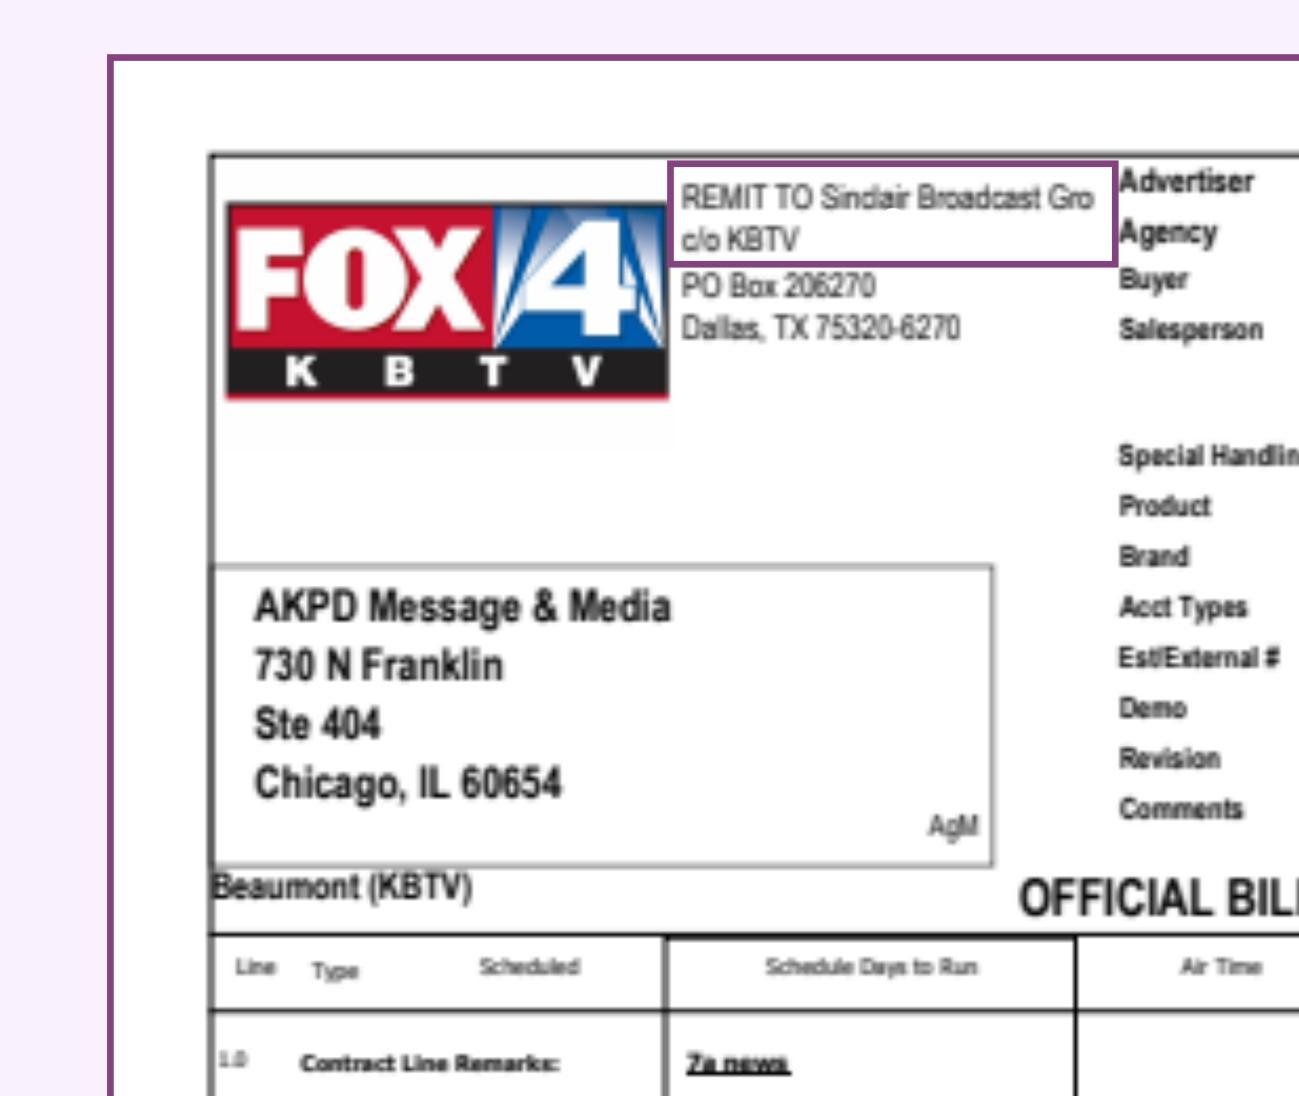

Ringer's scorers require structured documents.

Program sketches with scorer holes adapt traditional synthesis for messy data.

In particular, we can synthesize multiple scorers to identify information!

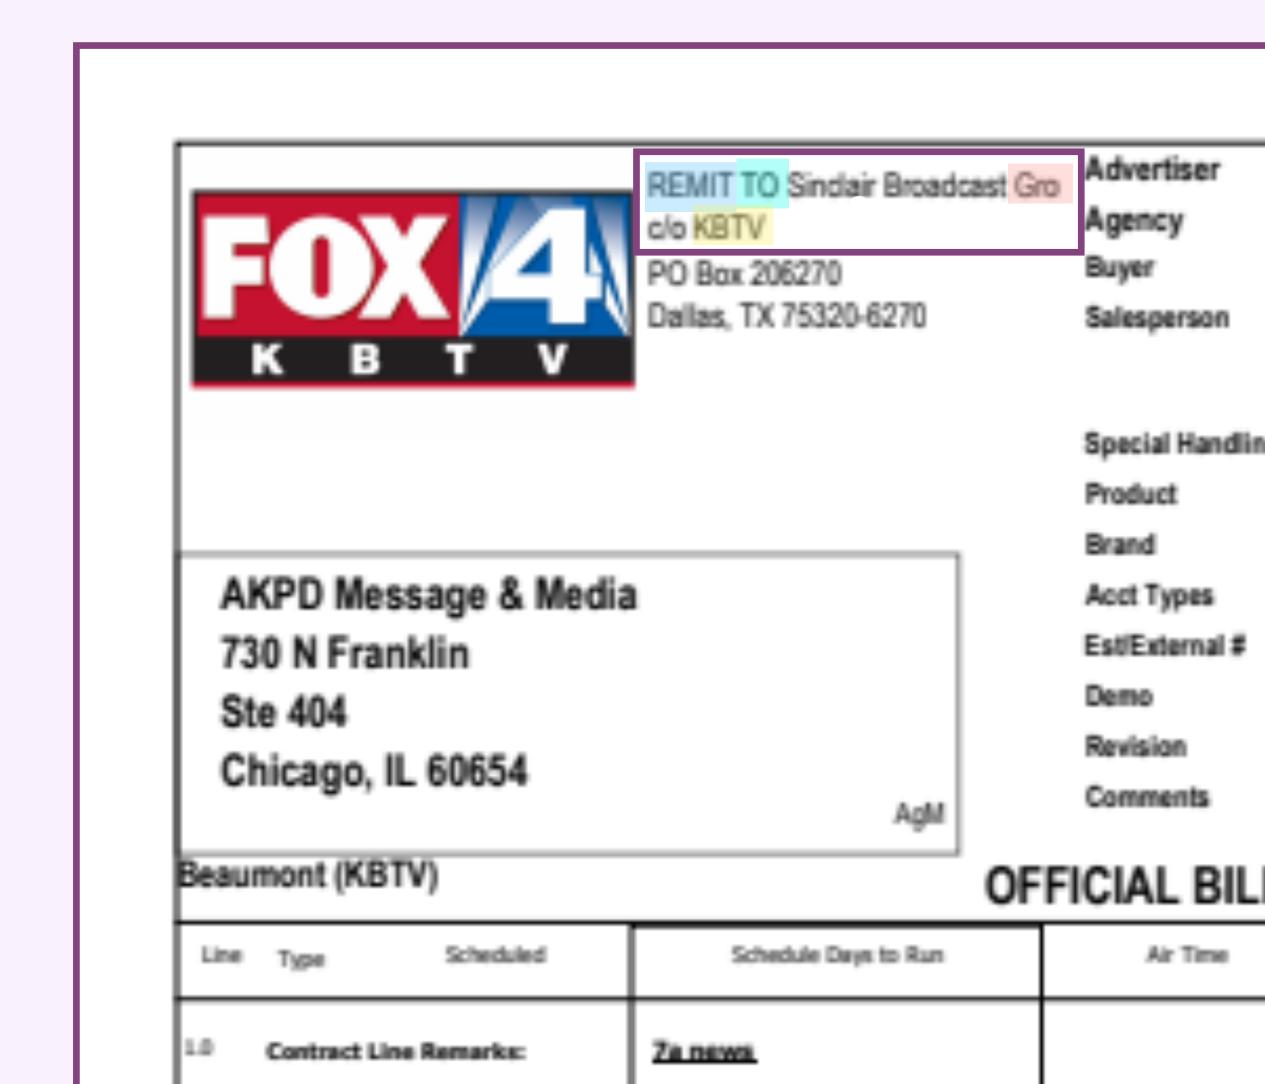

In particular, we can synthesize multiple scorers to identify information!

```
left = scorer (nodes)
right = scorer (nodes)
top = scorer (nodes)
bottom = scorer (nodes)

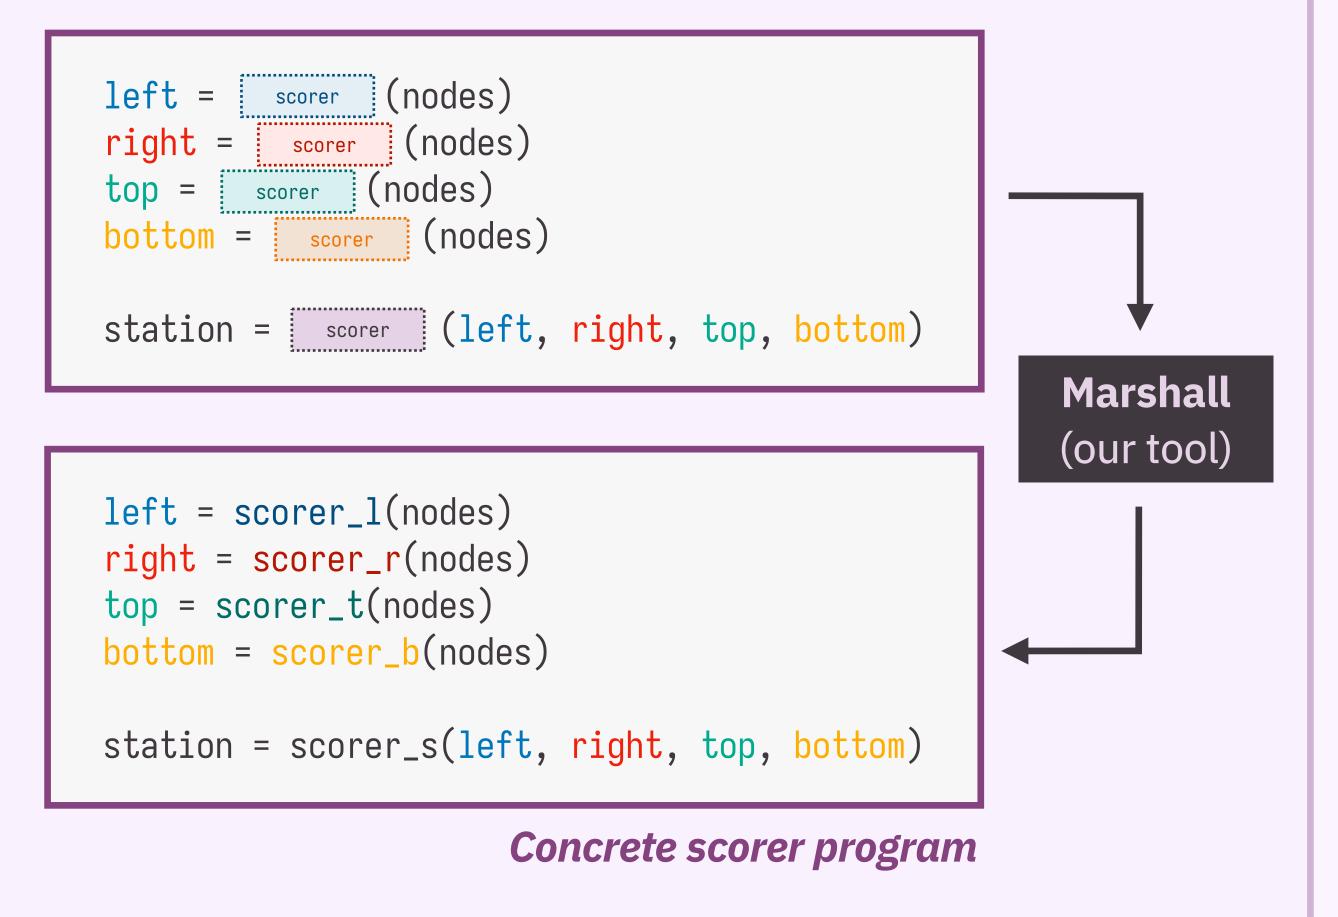

station = scorer (left, right, top, bottom)
```

Synthesize scorers to find the edges of the field, then use those results to find the field itself.

In particular, we can synthesize multiple scorers to identify information!

### Program sketch with scorer holes

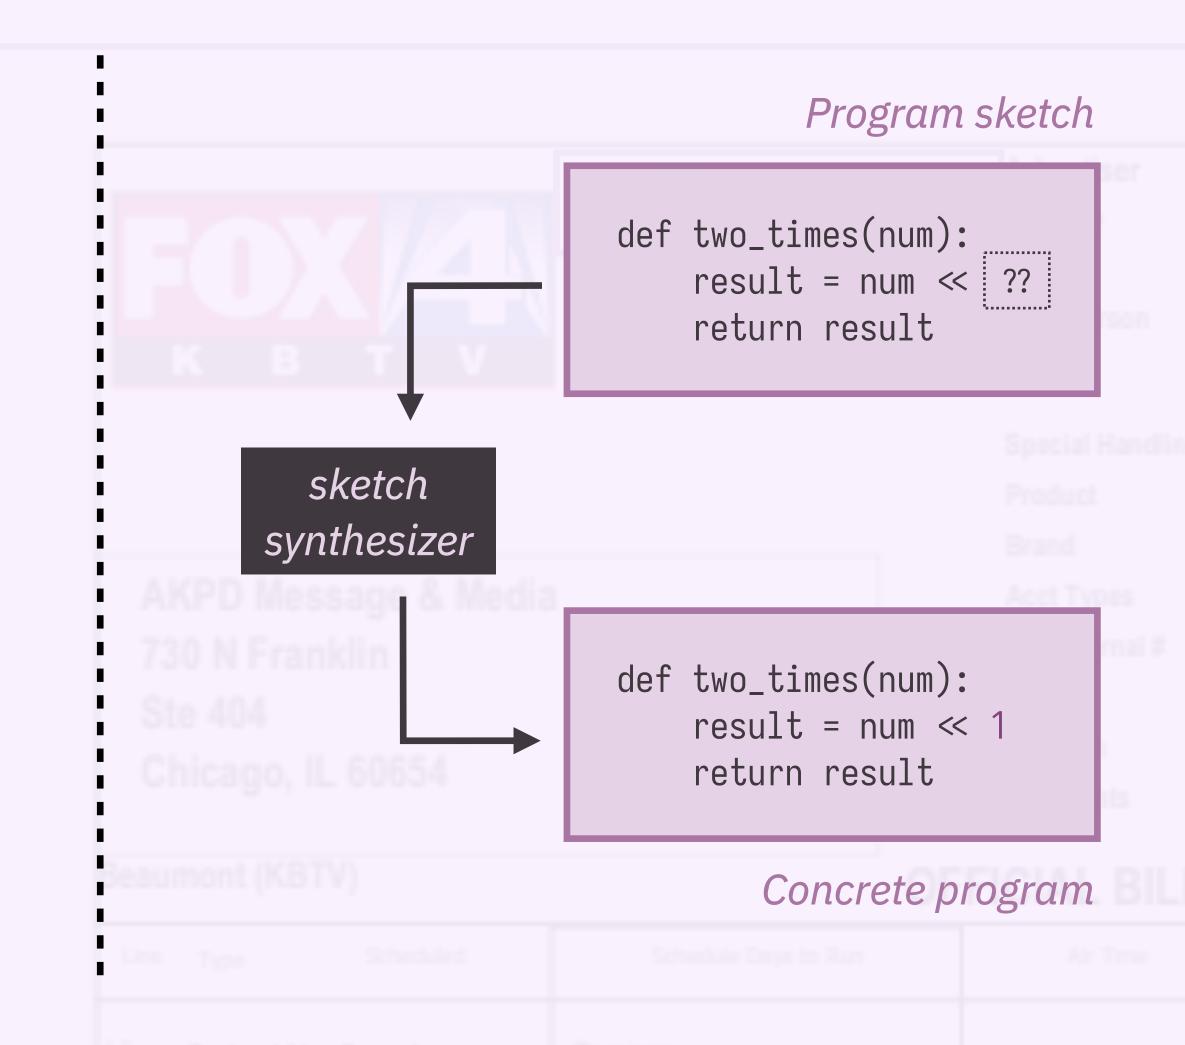

for messy data.

In particular, we can synthesize multiple scorers to identify information!

### Program sketch with scorer holes

```
scorer (nodes)
left =
right =
          scorer (nodes)
        scorer (nodes)
top =
bottom = scorer (nodes)
station = scorer (left, right, top, bottom)
                                                    Marshall
                                                    (our tool)
left = scorer_l(nodes)
right = scorer_r(nodes)
top = scorer_t(nodes)
bottom = scorer_b(nodes)
station = scorer_s(left, right, top, bottom)
                      Concrete scorer program
```

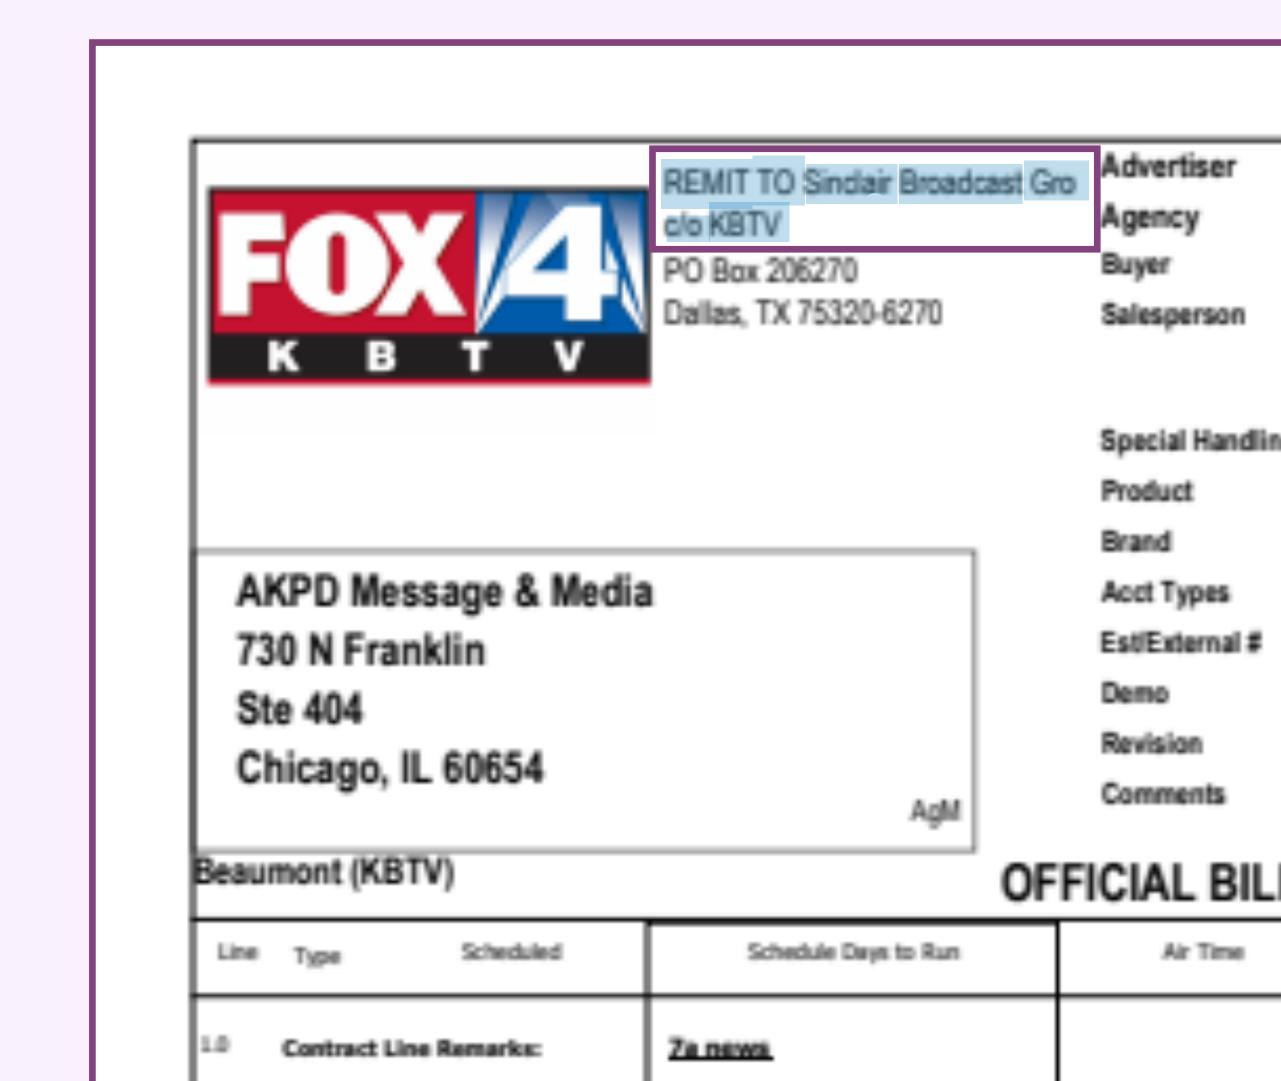

In particular, we can synthesize multiple scorers to identify information!

```
left = scorer (nodes)
right = scorer (nodes)
top = scorer (nodes)
bottom = scorer (nodes)

station = scorer (nodes)

inner = scorer (nodes)
station = scorer (inner)
```

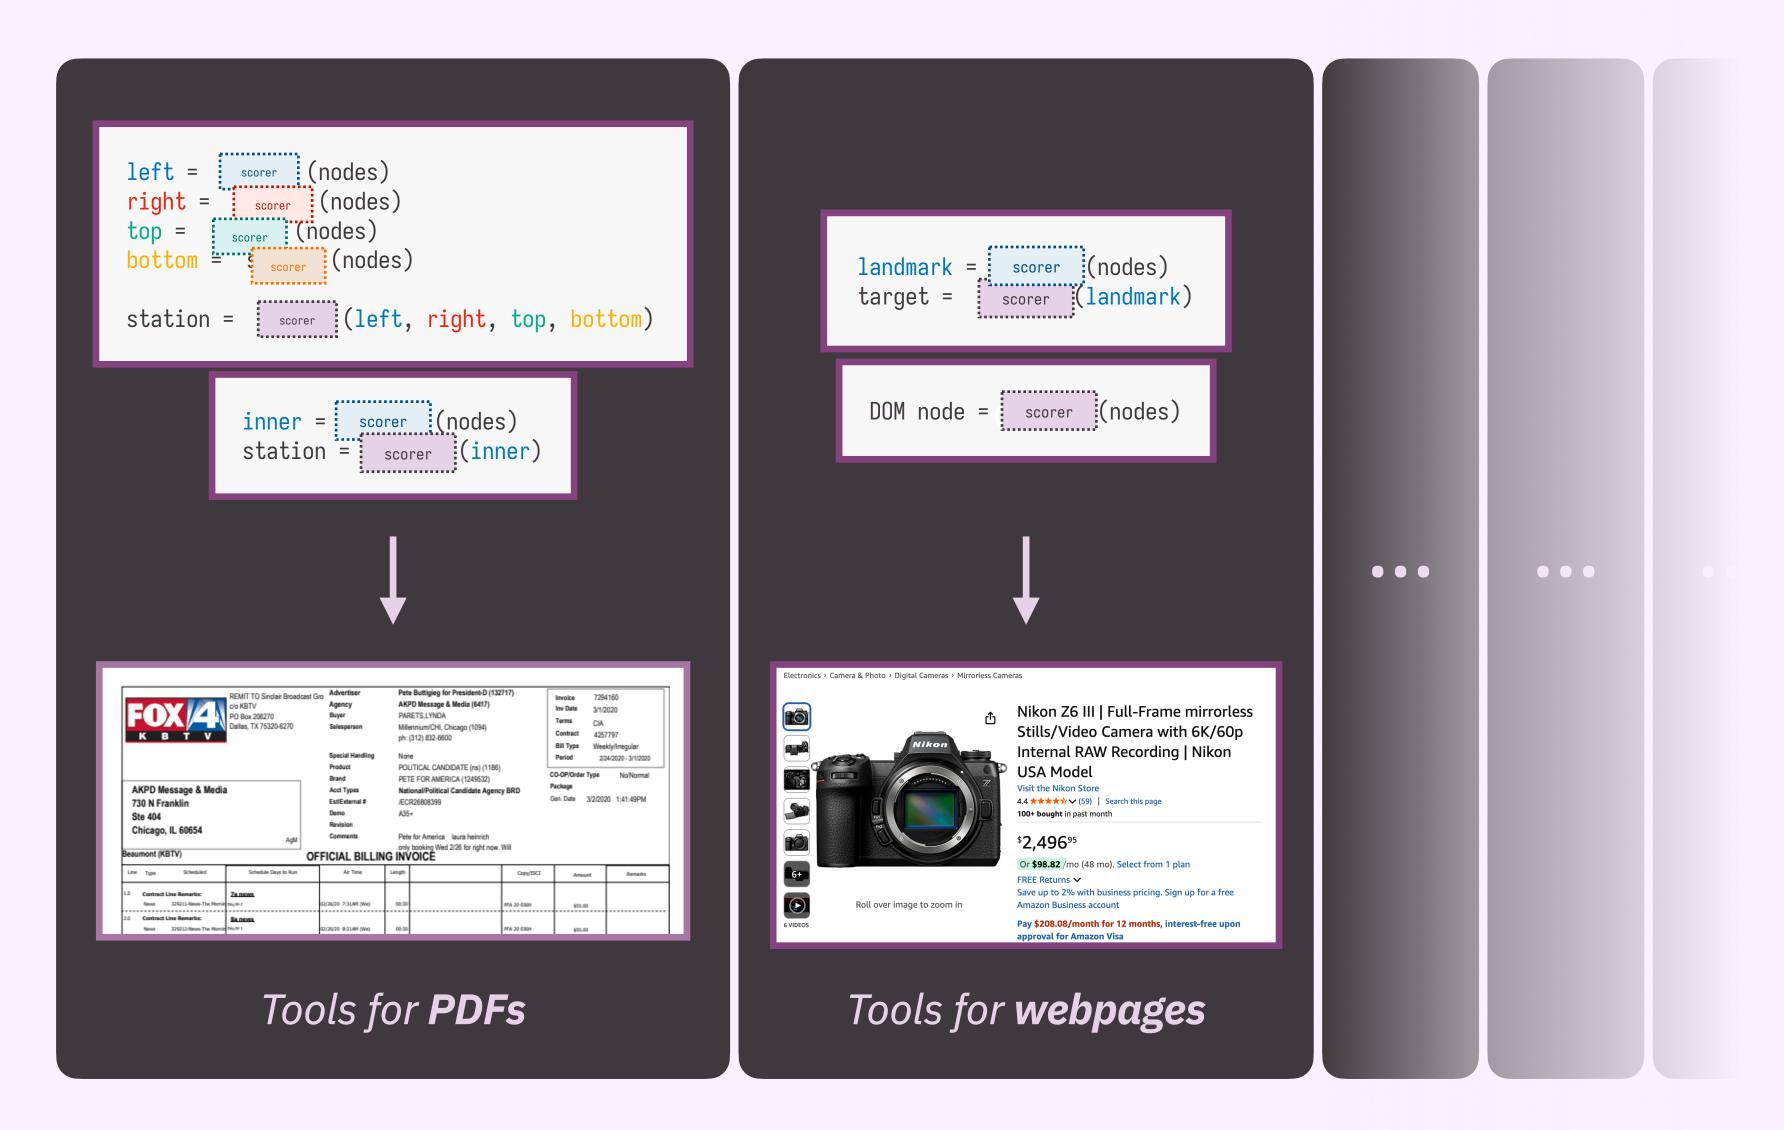

Synthesize one scorer to rank OCR boxes by likelihood of field inclusion, then synthesize another scorer to find the field itself.

Different program sketches with scorer holes...

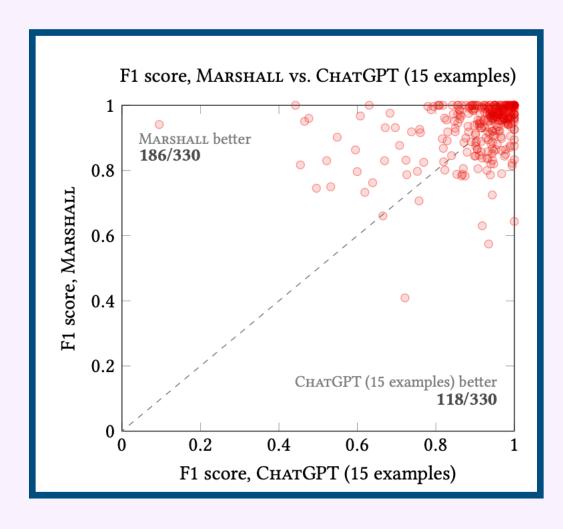

...yield different extraction tools for many domains.

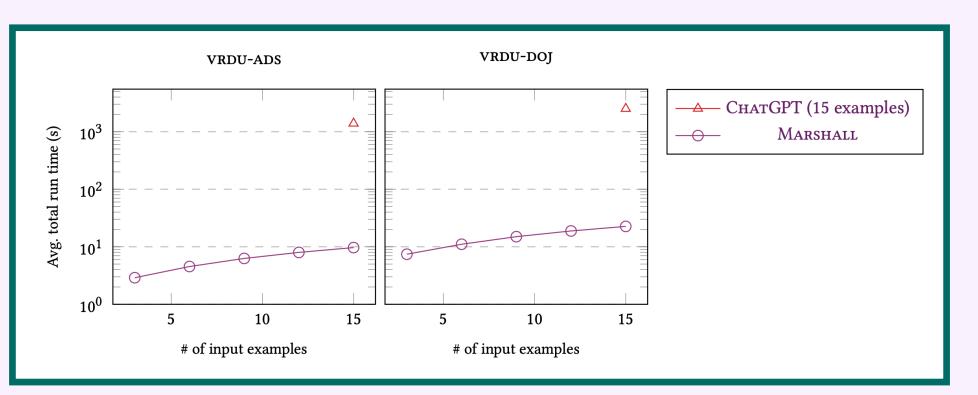

Does this work for actual datasets?

### Does this work for actual datasets?

### versus LLMs

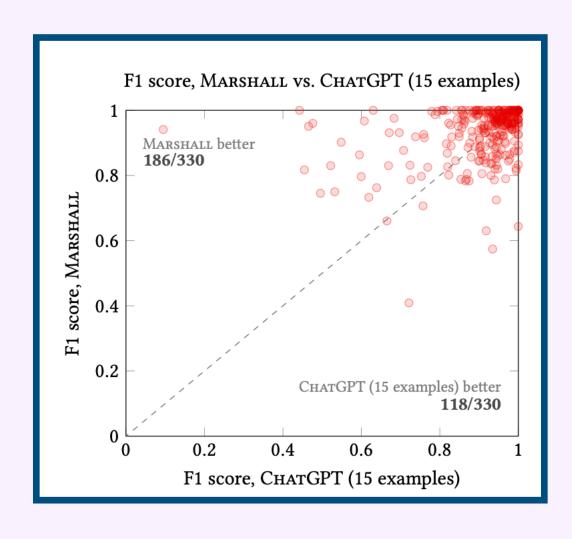

Our approach achieves precision and accuracy parity with GPT-4o...

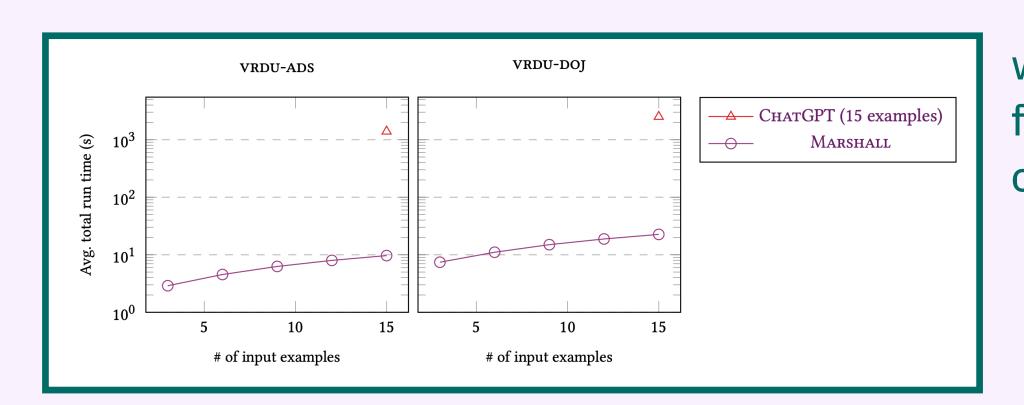

while running ≈120× faster and ≈95,700× cheaper.

### Does this work for actual datasets?

### versus LLMs

Our approach achieves precision and accuracy parity with GPT-4o...

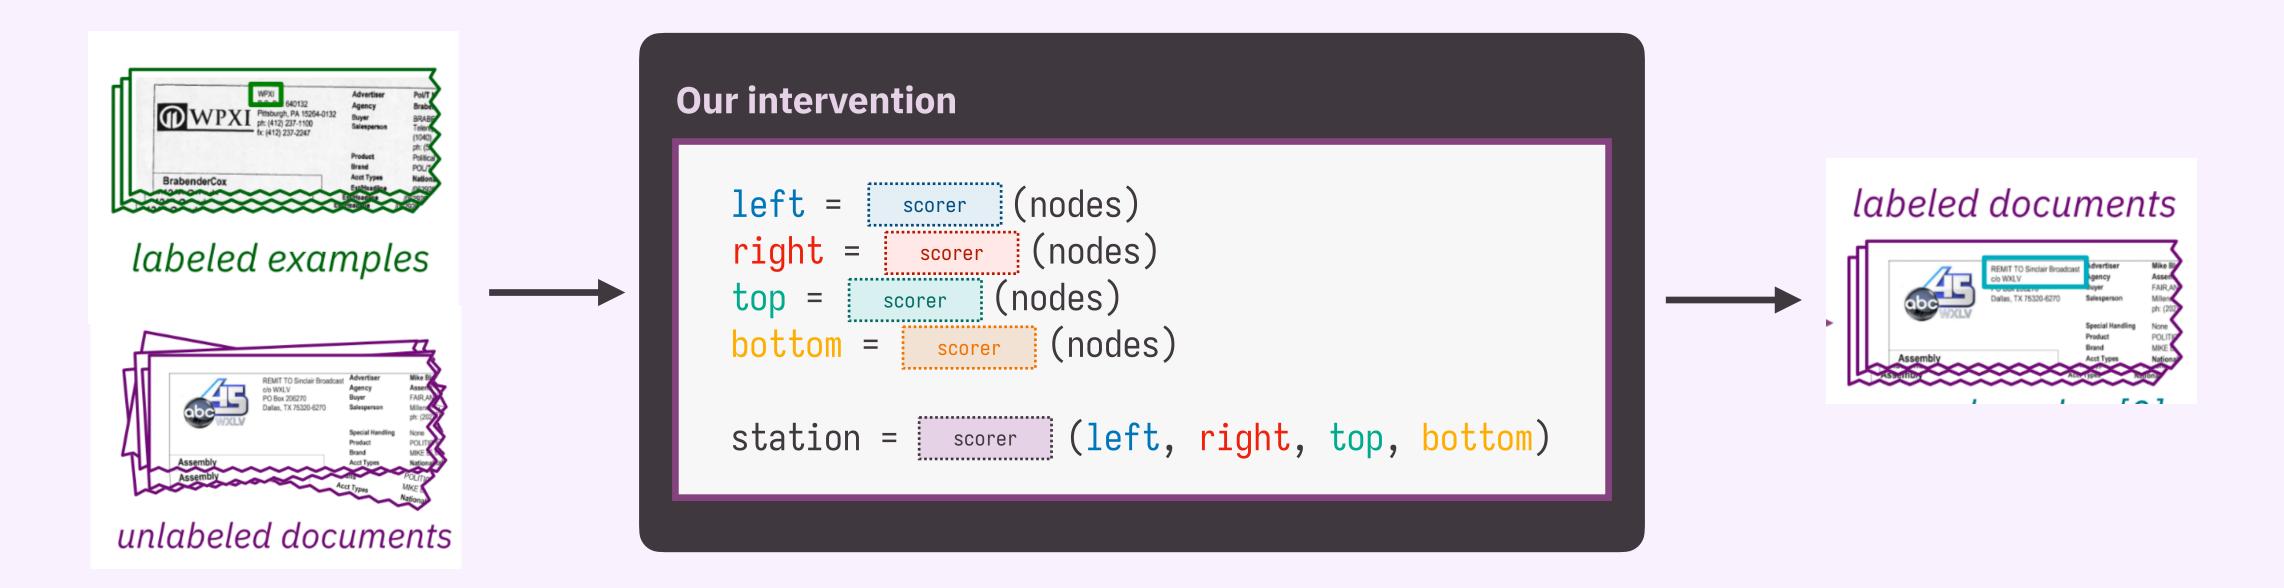

while running ≈120× faster and ≈95,700× cheaper.

### versus traditional synthesis

Marshall is 4,216,020.35× faster than Ringer.

## Program Sketches with Scorer Holes

an approach for retrieving info from heterogenous data by synthesizing multiple scorers.

David Minh-Duy Cao, Sarah E. Chasins dmcao@berkeley.edu
